PROFILE SUMMARY

I'm an MSc student in Managing AI in Business at the University of Salford, with a background in Python and a genuine interest in building practical AI tools, particularly chatbots. I like working things out methodically, whether that's fixing an IT issue, writing a prompt that actually gets the response I want, or figuring out how automation could save a business some time. Alongside my studies, I'm building on this through self-study and small personal projects, and I'm looking for opportunities to apply what I'm learning in a real business setting.

EDUCATION

MSc Managing AI in Business – University of Salford, UK (Expected 2026) Bachelor of Science (BSc) – Crawford University, Nigeria (2024) Secondary Education – Queen Maris Group of Schools (2020)

SKILLS

Python Programming, AI Chatbot Development, Prompt Engineering, Microsoft Power Platform (Power Apps, Power BI, Power Automate), API Integration, Automation & Workflow Design, Problem Solving & Analytical Thinking, Communication & Teamwork.

ONGOING PROJECTS

- Personal Portfolio Website – Designed and built my own portfolio website using AI-assisted tools (Bolt.new), working through several rounds of prompts to improve the design and functionality.
- AI Chatbot Study – Working through a structured, self-paced programme covering Python fundamentals through to chatbot development, with a particular interest in how conversational AI can be applied to real business problems.
- AI Chatbot Concept – Put together a basic chatbot concept to explore how prompt engineering can be used to automate user interactions and improve efficiency.

RELEVANT EXPERIENCE

AI Tool Governance and Licensing Register Intern, Salford Business School, University of Salford September 2026 – Present

- Conducting research into AI governance practices across higher education to support the School's AI governance approach.
- Developing a structured AI tool governance and licensing register, capturing licensing, approval, renewal and risk information.
- Building an interactive dashboard using Power BI/Power Platform to visualize AI tool governance, licensing and risk data.
- Analyzing licensing terms, copyright and data protection considerations to identify risks and support informed AI tool adoption.

IT Support Officer – Federal Radio Corporation of Nigeria (FRCN), Nigeria *2024 – 2025*

- Provided technical support to staff, resolving hardware and software issues to maintain daily operations.
- Diagnosed and resolved system faults, improving system reliability and reducing downtime.
- Maintained computer systems to ensure consistent performance across departments.
- Collaborated with team members to resolve IT-related challenges effectively.

Warehouse Operative – Evri, United Kingdom *2026 – Present*

- Processed and sorted over 500+ parcels per shift, ensuring timely distribution and meeting operational targets.
- Maintained high accuracy in parcel handling, reducing sorting errors and improving delivery efficiency.
- Coordinated with team members to manage parcel flow and ensure smooth warehouse operations during peak periods.
- Adhered to health and safety regulations, maintaining a safe and organised working environment.

TRAINING & CERTIFICATIONS

- Building a Personalized Chatbot with OpenAI and LangChain – LinkedIn Learning (2026)
- Python Programming – New Horizons (September 2023)
